## 1 About NDL Metadata Terms

The NDL Metadata Terms present the terms originally described by the National Diet Library. The terms from DCMI or other vocabularies are not represented in this document. The NDL's services use the NDL Metadata Terms, DCMI Metadata Terms and others. See the "2. DC-NDL Application Profile" document that specifies the usage and examples for describing both terms.

The NDL Metadata Terms are divided roughly into "Property", "Vocabulary Encoding Scheme", "Syntax Encoding Scheme" and "NDL Type Vocabulary".

"Property" comprises "Standard Property" and "Extensive Property". The former describes the terms general for describing metadata of books, articles etc. and the terms appropriate for describing in the RDF format which is recommended in the National Diet Library Dublin Core Metadata Description (DC-NDL). The latter describes the terms that cannot describe metadata in RDF format and the terms added according to the requirements of NDL systems.

In accordance with the domain, the terms of "Property" are divided into four categories, namely "Describing a resource", "Describing Item Information of the resource", and "Describing Management Information of the resource" and "Describing person and group entity". In each category the terms are grouped based on their characteristics.

DC-NDL is based on a triple-layer data model, which comprises "Bibliographic Information", "Item Information" and "Management Information" and these layers link to each other. "Item Information" is a Class for describing holdings information in libraries or other institution. "Management Information" is a Class for describing managing information such as status of metadata record. In this document, the terms for "Bibliographic Information", "Item Information" and "Management Information" represent each "3.1 Describing a resource", "3.2 Describing Item Information of the resource" and "3.3 Describing of Management Information of the resource".

## 2 Explanation of Table Components in this document

Each term is specified with the following set of attributes:

<b>Name</b>	
URI	The Uniform Resource Identifier used to uniquely identify a term
Label	The human-readable label assigned to the term
Definition	A statement that represents the concept and essential nature of the term
Comment	Additional information about the definition
Type of Term	The grammatical category of the term. "Property", "Vocabulary Encoding Scheme", "Syntax Encoding Scheme" or "Class"
Super Property	A Property that is superordinate to the term
See	Authoritative documentation related to the term
Domain	A Class of which a resource described by the property is an Instance
Range	A Class of which a value described by the property is an Instance
Subclass Of	A Class to which the described term is subordinated
Member Of	An enumerated set of resources (Vocabulary Encoding Scheme) of which the term is a Member
Date Created	Date when the term was described by NDL Metadata Terms
Date Modified	Date when the term was last modified by NDL Metadata Terms
